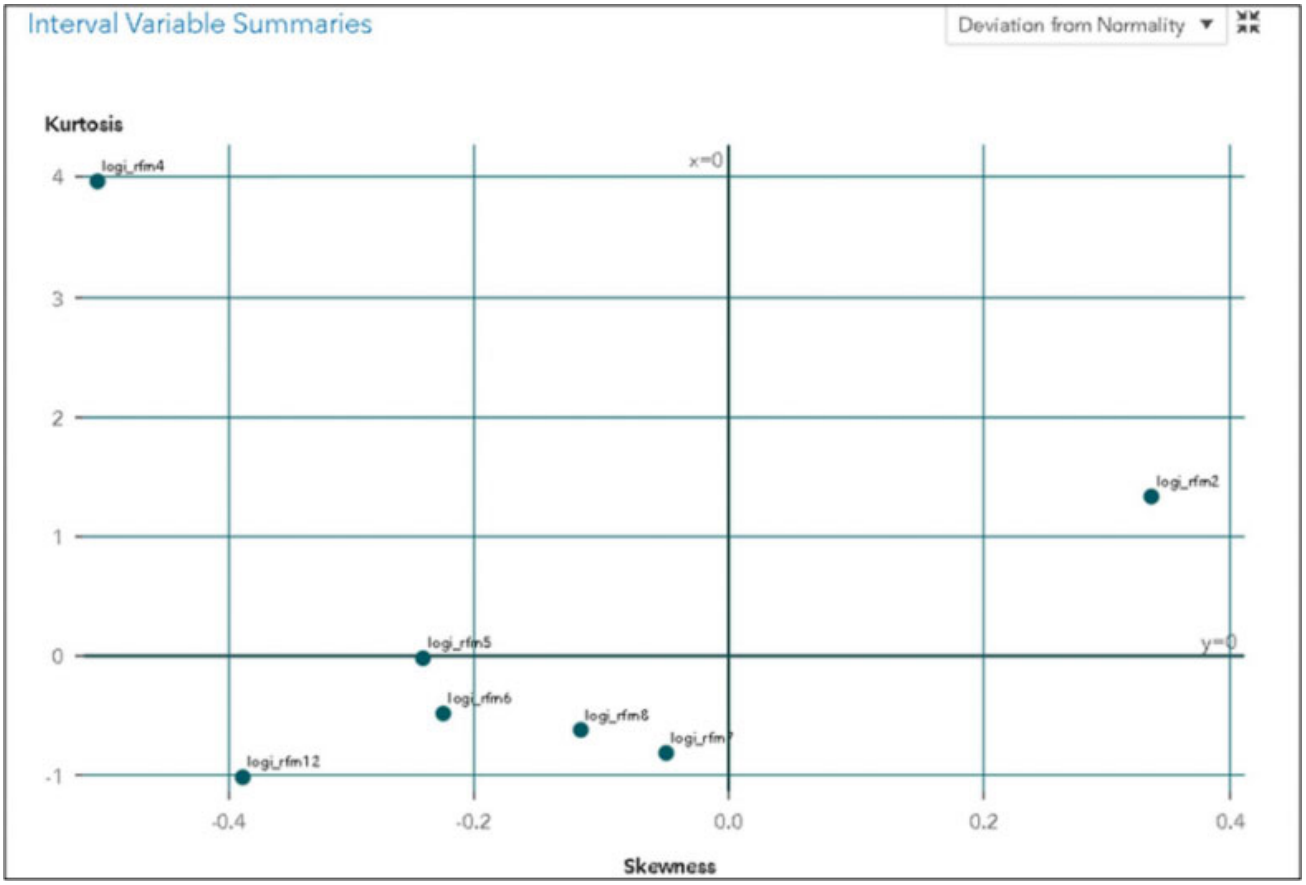
Title : SAS Viya Supervised Machine Learning Pipelines

Version : DEMO

1.Refer to the exhibit below:



Based on the output from the Data Exploration node shown in the exhibit, which variable has the most thin tails (most platykurtic distribution)?

A. Logi_rfm4

B. Logi_rfm6

C. Logi_rfm8

D. Logi_rfm12

Answer: D

2.Given the following properties for a neural network model, which statement is true regrading hidden units in the model? The following SAS program is submitted:

Properties

Property name	Property value
missAsLevl	false
inputStd	STD
nHidden	1
hiddenAll	false
hiddenAllNum	50
actFuncAll	TANH
hidden1	26
actFunc1	TANH

A. There are no hidden units in the model.
B. The number of hidden units is 1.
C. The number of hidden units is 50.
D. The number of hidden units is 26.
Answer: D

3.Which of the following is an example of a NoSQL database that is commonly used to store unstructured data?
A. MySQL
B. MongoDB
C. Oracle Database
D. Microsoft SQL Server
Answer: B

4.What is the primary goal of A/B testing in the context of model deployment?
A. To evaluate the model's accuracy
B. To compare two different versions of a model or strategy to determine which performs better
C. To assess data quality
D. To create synthetic data
Answer: B

5.What does the term "bias" in machine learning refer to?
A. A model's inability to generalize to new data
B. Systematic errors that cause a model to consistently underpredict or overpredict
C. The simplicity of a model
D. The overall accuracy of a model
Answer: B
