Referring to the exhibit you have configured an L2 circuit that connects Site-1 and Site-2, but the L2 circuit is not functioning The topology in this scenario is shown below.

Site-1 > PE-1 > P-1 > P-2 > PE-2 Site-2

Which action will allow communication between Site-1 and Site-2?

- A. Change the virtual circuit identifier to 2 for PE-2.
- B. Add the family inet statement under the ge-0/0/1.512 interface for PE-1 and PE-2.
- C. Add the lo0 interface under the {edit protocols ldp} hierarchy for all routers.
- D. Add the lo0 interface under the {edit protocols l2circuit} hierarchy for PE-1 and PE-2

Answer: C

2.Which command will match communities 101:111,111:1, and 999:1111?

- A.set policy-options community COMMUNITY members "^...:1?"
- B.set policy-options community COMMUNITY members "^1.*:1+"
- C.set policy-options community COMMUNITY members ["^1.1:1?" 999:1111]
- D.set policy-options community COMMUNITY members "^...:1+"

Answer: D

    }
  }
}
```

Referring to the exhibit, you have configured an L3VPN that connects Site-1 and Site-2 together, but the BGP routes are being hidden on the PE routers. The topology in this scenario is shown below.

Site-1 > PE-1 > P-1 > P-2 > PE-2 > Site-2

Which two actions would allow communication Site-1 and Site-2? (Choose two.)

- A. Disable CSPF on under MPLS on P-1 and P-2.
- B. Configure DGP on P-1 and P-2.
- C. Enable RSVP for all interfaces on P-1 and P-2.
- D. Enable LDP for all interfaces on all routers.

Answer: C, D

4. A layer 2 circuit (RFC 4447) is established between two PE routers to provide connectivity between two customer sites. Which two statements related to this deployment are true?

- A. Kompella encapsulation is used in the data plane communications.
- B. LDP must be used for the control plane communications
- C. BGP must be used for the control plane communications.
- D. Martini encapsulation is used in the data plane communications.

Answer: B, D

5. Click the exhibit button

```
[edit protocols pim]
user@R1# show
rp {
  bootstrap {
    family inet {
      priority 250;
    }
  }
  local {
    address 10.220.1.1;
    priority 1;
    group-ranges {
      224.1.1.11/32;
      224.0.0.0/4;
    }
  }
}
interface all;
interface fxp0.0 {
  disable;
```

```
}  
  
[edit protocols pim]  
user@R4# show  
rp {  
  bootstrap {  
    family inet {  
      priority 249;  
    }  
  }  
  local {  
    address 10.220.1.4;  
    priority 5;  
    group-ranges {  
      224.1.1.12/32;  
      224.0.0.0/4;  
    }  
  }  
}  
interface all;  
interface fxp0.0 {  
  
  disable;  
}
```

Referring to the exhibit, which router will be the RP?

- A. R4 for all groups
- B.R1 for group 224.1.1.11 and R4 for all other groups
- C.R1 for all groups
- D.R4 for group 224.1.1.12 and R1 for all other groups

Answer: A
